

Important Metrics:

Views: 42,315

Add To Cart: 3,939

Checkouts: 2,109

Purchases: 1,215

Conversion:

View → Cart: 9.31%

Cart → Checkout: 53.54%

Checkout → Purchase: 57.61%

Overall View → Purchase: 2.87%

Business Insight:

The funnel shows a major drop-off at the first conversion stage, where only 9.31% of product views convert into add-to-cart actions. However, once users add products to cart, more than half proceed to checkout, and 57.61% of checkout users complete purchases. This indicates that the main conversion bottleneck is product engagement before cart addition, while checkout performance is relatively strong.

SQL INSIGHTS

Significant Drop-Off Between Product Views and Cart Additions: -

- The analysis reveals that while product views are high (42,315 events), only a small percentage of users proceed to add products to their carts. This indicates that product engagement and purchase intent decline sharply after the discovery stage. Improving product pages, pricing strategy, and promotional offers could help increase cart additions and overall conversions.
-

Sports & Home Categories Drive the Highest Purchase Activity: -

- Sports & Fitness emerged as the highest-performing category with 118 purchases, closely followed by Home Kitchen and Toys & Games. The results indicate strong customer demand for lifestyle, household, and recreational products. In contrast, high-value electronics categories generated fewer purchases, suggesting that customers may require longer decision cycles before completing transactions. Businesses can leverage this insight by prioritizing promotions and inventory planning for high-converting categories.

Laptop Brands Generate the Highest Revenue: -

- Acer emerged as the highest revenue-generating brand, contributing over 2.27 million in revenue, followed by Dell, Asus, and HP. The dominance of laptop manufacturers among the top revenue contributors indicates that high-value electronics significantly impact overall sales performance despite lower purchase frequency. This suggests that premium technology products play a critical role in revenue generation and should be prioritized for targeted marketing campaigns, inventory management, and customer retention initiatives.
-

Mobile Users Drive the Majority of Revenue and Purchases: -

- Mobile devices accounted for the highest purchase activity with 816 completed purchases and generated more than 15.5 million in revenue, significantly outperforming desktop and tablet users. This indicates that customers predominantly shop and convert through mobile devices, making mobile experience optimization a critical business priority. The findings suggest that improving mobile page performance, checkout flow, and app engagement strategies could have the greatest impact on future revenue growth.

Organic Traffic Delivers the Strongest Business Performance: -

- **Organic traffic emerged as the most valuable acquisition channel, generating 419 purchases and more than 9.4 million in revenue. Although Paid Search and social media contributed significantly to conversions, Organic Traffic remained the single largest revenue-generating channel. This suggests that customers arriving through organic channels exhibit stronger purchase intent and higher engagement levels. The results highlight the importance of SEO, content marketing, and brand visibility strategies in driving sustainable long-term growth while reducing dependence on paid acquisition channels.**
